Spreading Out the Workload

- Run Winlink Express on multiple PCs connected to a wired or wireless LAN.
- Turn on File Sharing on all PCs.
- Create a folder for sharing Winlink messages on one of the networked PCs and mark it for sharing (i.e., make it a public folder).
- Messages can be created on any PC using Winlink Express and placed in Outbox.
- Select one or messages in the Outbox and export them to the public folder.
- On the PC controlling the radio, import the messages from the public folder. By default, imported messages are placed in the Outbox. Open a session and start a connection to an RMS to send the messages.
